

Utility Pole Hole Covers

Utility companies are using DICA Pole Hole Covers to help meet OSHA requirements and temporarily cover open holes with a tool that's easy to store, easy to find and easy to use by a single operator. Strategically placed holes in the cover allow for stakes to be driven into the ground to hold the cover in place. The Hi-Viz Yellow coloring makes them easily distinguishable from the surrounding surfaces.

The round design makes it easy to roll the covers into place and the hand-holds make lifting, storing and carrying simple. DICA's Utility Pole Hole Covers have a maximum rated capacity of 500 pounds and are manufactured using engineered thermoplastic in round designs.

KEY FEATURES

- ▶ **Manufactured using engineered thermoplastic for repeat use.**
- ▶ **Functional design can be easily stored and deployed securely.**
- ▶ **Round capacity has a 500 pound maximum rated capacity.**
- ▶ **Helps satisfy hole cover requirements of OSHA.**
- ▶ **Made in the USA.**
